

## LISTING OF THE CLAIMS

### **Claims pending**

- At time of the Action: Claims 1-16.
- After this Response: Claims 1-2, 5-13, and 15-16.

**Canceled or Withdrawn claims:** Claims 3, 4 and 14.

**Amended claims:** Claims 1 and 10.

**New claims:** None.

1. (Currently Amended) Apparatus for displaying information from a portable communications device, having a data output port and a scrollable display, on a remote projection display device having a data input port, the apparatus comprising:

a first data port associated with a cradle for receiving the portable communications device, the first data port adapted to be coupled to the data output port of the portable communications device, the first data port for receiving remote data from the portable communications device; ~~and~~

a second data port that is adapted to be coupled to the data input port of the remote projection display device, the second data port for automatically, upon placement of the portable communications device into the cradle, providing to the remote projection display device a representation of the remote data received from the portable communications device[.]; and

a scroll controller that is adapted to cause the remote projection display device to provide a scrolling display of information that corresponds to the scrollable display of the portable communications device;

1           wherein the scroll controller comprises a control device that is  
2           integrated into an automobile steering wheel and is adapted to be  
3           electrically connected to the remote projection display device.  
4

5           2.     (Previously Presented) Apparatus according to claim 1, further  
6 comprising:

7                     a data translator, coupled between the first data port and the second  
8 data port, that formats the remote data received from the portable communications  
9 device into a format from which the remote projection display device can provide  
10 a projected display.  
11

12           3.     (Cancelled).  
13

14           4.     (Cancelled).  
15

16           5.     (Original) Apparatus according to claim 1, wherein the portable  
17 communications device is an Internet appliance.  
18

19           6.     (Original) Apparatus according to claim 1, wherein the portable  
20 communications device is a cellular telephone.  
21

22           7.     (Original) Apparatus according to claim 1, wherein the portable  
23 communications device is a personal digital assistant.  
24  
25

1           8.     (Original) Apparatus according to claim 1, wherein the remote  
2 projection display device provides the projected display on an automobile  
3 windshield.

4           9.     (Original) Apparatus according to claim 8, wherein the remote  
5 projection display device is a heads-up display device that is integrated into an  
6 automobile.

7  
8           10.    (Currently Amended) Apparatus for hands-free communication  
9 using a portable communications device, the apparatus adapted to receive remote  
10 data from the portable communications device via a wireless telecommunications  
11 link, the portable communications device having an externally accessible data  
12 output port, the apparatus comprising:

13               a housing that is adapted to receive the portable communications  
14 device;

15               a sensor for detecting placement of the portable communications  
16 device into the housing;

17               a first interface for coupling the data output port of the portable  
18 communications device to the housing;

19               a second interface for coupling the housing to a data input port of a  
20 remote projection display device; and

21               a processor for receiving the remote data from the portable  
22 communications device, converting the received remote data to a format  
23 displayable by a remote projection display device, and forwarding the converted  
24 remote data to the remote projection display device via the second interface for  
25

1 automatic display upon detection of placement of the portable communications  
2 device into the housing[.];

3 wherein the portable communications device includes a scrolling  
4 capability, and the processor includes a scroll controller that receives scrolling  
5 commands from a remote scroll control device that is adapted to be integrated into  
6 an automobile steering wheel and adapted to cause the remote projection display  
7 device to provide a scrolling display of the converted remote data based on the  
8 scrolling commands.

9  
10 11. (Original) Apparatus according to claim 10, further comprising a  
11 cable that is adapted to couple the second interface to the projection display  
12 device.

13  
14 12. (Original) Apparatus according to claim 10, wherein the second  
15 interface is a wireless interface that is adapted to couple the housing to a  
16 corresponding wireless interface of the remote projection display.

17  
18 13. (Original) Apparatus according to claim 10, wherein the processor  
19 includes a data translator that formats the data received from the portable  
20 communications device into the format from which the remote projection display  
21 device can provide the projected display.

22  
23 14. (Cancelled).

1           15. (Original) Apparatus according to claim 10, wherein the first  
2 interface is a serial port connector and the second interface is a serial port  
3 connector.  
4

5           16. (Previously Presented) Apparatus according to claim 10, wherein a  
6 connection between the first interface and the data output port of the portable  
7 communications device is achieved upon receipt of the portable communications  
8 device.
